

A. Number strips

B. Column headings

Choose which of these two you would like (or both).
 (The second one provides scaffolding for those who need help to remember which direction to move the digits when multiplying or dividing)

1. Cut out and laminate a Number strip (A)
2. Cut out the Column heading (B) of your choice. Laminate and cut a slit along each dotted line.
3. Insert the strip into the column heading, so the strip is visible in between the wider gaps of the dotted lines
